                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                versus
```

and Creutzfeldt-Jakob

disease.

```
CC transgenic animals, transgenic plants, and methods of making and computed them. The anti-TNF antibody comprises at least a portion of CC an immunoglobulin molecule, especially the heavy chain and/or light Chain variable regions given in the present sequence and in AMS1165, or either all of the CDRs of the light chain (see AAMS1165) or all of the CDRs of the light chain (see AAMS1165) or all of the CDRs of the light chain (see AAMS1165) or an animal composition of the light chain (see AAMS1165) or all of the CDRs of the light chain (see AAMS1165). The antibody may inhibit TNF-induced cell adhesion molecules, comprovement in a mouse model. It is useful for diagnosing or animal comprovement in a mouse model. It is useful for diagnosing or animal comprovement in a mouse model. It is useful for diagnosing or allergic rhinitis, Crohn's pathology, sickle cell anaemia, diabetes, a cardiovascular disease such as arteriosclerosis, atherosclerosis, composition of a cell such as bacterial, viral, and fungal infectious compositions, chronic myelocytic laukaemia, Burkitt's lymphoma and complete myeloma, or a neurological disease such as multiple sclerosis, Parkinson's disease, spinal ataxia, Alzheimer's disease con and CC and Creutzfeldt-Jakob disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               vuk, granted anti-TNF antibodies, immunoglobulins, cleavage products and other specified portions and variants, as well as anti-TNF antibody compositions, encoding or complementary nucleic acids, vectors has calls commonly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides isolated human, primate, rodent, mammal chimeric, humanised and/or complementarity determining region (CDR)-grafted anti-TNF antibodies, immunoglobulins, cleavage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       acids, vectors,

the resurfacing approach of the invention, three humanisation experiments were set up: (1) traditional loop grafting; (2) resurfacing approach using most similar chain; and (3) resurfacing approach using human sequences with most similar surface residues. The Ab used was the murine anti-N901 Ab (see AAR52064). Experiment 2 was carried out using the present sequence which represents the human AAG36005 Ab heavy chain variable region with 89 percent homology with anti-N901 Ab. N901/AAG36005 (AAR52065) was propd. by CDR grafting. Sequence numbering starts at 118 in the specification.

The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat disease associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and
